## PROJECTS

### TECHNIQUES TO REDUCE ELECTRICITY BILL

<https://ebcalculatorchart.netlify.app/>

- “Techniques to Reduce Electricity Bill” is a comprehensive web application designed to help users understand their electricity consumption and discover effective strategies to reduce their electricity bills.
- The project includes a dynamic electricity bill calculator, an interactive electricity unit per rate chart, and valuable tips for energy conservation.
- “Techniques to Reduce Electricity Bill” highlights my ability to build practical, user-focused applications that provide real-world value.

### Dynamic Image Gallery

- Designed and developed the frontend of dynamic image gallery web application from scratch focusing on user experience and performance.
- Implemented search and filter functionalities to allow users to find images easily and sort them by categories.
- Added image download and image like feature, enabling users to save their favorite images directly from the gallery. Ensured the application supports endless scrolling and pagination for a seamless user experience.
